

Trey is the founder of Trek EC, a new environmental firm that provides services to promote the reuse of brownfields and conservation of greenfields. Prior to founding Trek EC, Trey led the environmental team in Terracon's Birmingham and Huntsville, Alabama offices, directing comprehensive environmental investigations at brownfield redevelopment sites and other regulated properties.

Trey graduated from the University of Alabama with a degree in Geology, and began his career consulting in the energy sector in 2003. He consulted on unconventional natural gas research and development before shifting gears to focus on the assessment, cleanup, and reuse of contaminated land. He has extensive experience in brownfield assessment and cleanup, risk-based corrective action, Phase I and Phase II Environmental Site Assessments, vapor intrusion assessments and mitigation alternatives, conservation support, and regulatory compliance.

Originally from Foley, Alabama, Trey now calls Birmingham's historic Bush Hills neighborhood home. He has witnessed and participated in the revitalization of his adopted hometown since moving to the Birmingham area in 2007. Trey served on the Junior Board of the Freshwater Land Trust from 2014-2017 and currently serves as Secretary of the Alabama Brownfields Association, an organization he helped found to promote the reuse of Alabama's brownfields as a means to improve the environment while stimulating economic development.
