

Mr. William Burke is a Project Hydrogeologist with over 6 years of experience in environmental consulting, primarily focusing in the realms of soil and groundwater assessment/remediation and environmental due diligence. Mr. Burke is a licensed Professional Geologist in the environmental field and has provided consulting expertise on a variety of environmental projects in many areas of the United States. Mr. Burke has utilized several different assessment techniques to design and implement effective remedial investigations for a wide variety of contaminants including chlorinated solvents, pesticides, petroleum related contaminants and inorganic compounds. Mr. Burke also has experience with hydrogeologic data acquisition and interpretation to assess contaminant transport and migration. Mr. Burke holds both a Bachelor's and Master's in Geology from The University of Alabama.
